PTI Engineered Plastics Announces Laser Marking Capabilities

The growing demand for product identification and traceability led PTI to invest in some of the latest laser technology. With the recent acquisition of the Telesis E-Series, EV15 Class 4 Marking System with Class 1 Lasing FDA certified enclosure we are now capable of providing customers with a 6.89 X 6.89 marking window of permanent, precision quality surface engraving.

Visit PTI at: www.teamPTI.com

Since the permanence of the mark won't change over time this application is ideal for medical tools, industrial tools, sporting goods, serial numbers, measurements, lot codes, and customized designs.

Please contact us if you would like to see a sample and we hope you consider PTI for your future laser marking needs.
