

PTI becomes a Certified RJG Mold Builder and Tryout Facility

Congratulations to the PTI staff that were part of the RJG Certification process. PTI is now recognized as a Certified RJG Mold Builder and Tryout Facility. What a great accomplishment and leap forward as a leader in the injection molding industry. PTI recognizes that to maintain our industry leading status, we need to continually raise the bar on our services and capabilities. Through the significant expansion of this technology, we not only offer our customers greater value, we also achieve outstanding optimization of our molding operations. The training at times was very intense and extremely technical in nature. "RJG"'s lead trainer was impressed with the level of dedication and support that was shown by the PTI team.

Our initial RJG Team consists of: Rob Tolitsky, Randy Kliemann, Sam Holdsworth, Karl Staffhorst, Kevin Lewis, Ian Nummer, Sam Marchione, Rob Wuest, Bob Baur, Lenny Dye, and Scott Lehman.

As we continue with the next phases of the RJG implementation all process technicians and engineers will go through systematic training.

Our certification also comes with very good timing, allowing a formal announcement from RJG boasting PTI's capabilities during the 2006 NPE show at the end of June. The NPE stands for (National Plastics Exposition) which is truly international and the largest plastics show in the world.

RJG technology through the use of cavity pressure sensors will allow us to maintain consistency in our processes through direct plastic pressure versus our standard machine settings.

Once again, GREAT JOB to everyone who participated in the training.
